The fascination of wood

Wood is experiencing an unprecedented revival. The material has a bright future: it is environmentally responsible, has excellent properties, endows buildings with a new personality – and strikes a note in the human heart that we just cannot escape.

Wood strikes a note in the human heart that we just cannot escape.

PUR – progress in adhesive technology

The potential of PUR adhesives is reshaping the field of engineering wood construction. The laws of structural design are being reinterpreted as new manufacturing methods for semi-finished products and the amazing properties of these adhesives are opening up new dimensions for load-bearing structures.

Purbond is a Swiss company which as a center of competence has resolved to help this exciting technology achieve a breakthrough – in close cooperation with building contractors, architects, structural engineers, machine manufacturers and also approval boards with the courage and foresight to break the mould and explore new territories.

Working with Purbond means

1. gaining the confidence needed to tap into the latest insights in PUR technology,
2. having access to a broad range of adhesives to select the ones that are best suited to any given application,
3. receiving the technical support required to convert to the new technology,
4. working with adhesives that have the necessary approvals,
5. trouble-free projects thanks to Purbond's excellent working relationships with all bodies – Purbond handles the coordination of the entire application,
6. offering deliverables that are environmentally responsible and sustainable,
7. achieving a high level of competitiveness – with a positive impact on margins and profitability.
